

RAG Application Test Document

=====

This is a lightweight document intended for automated testing of Retrieval-Augmented Generation (RAG) systems.

It contains predictable phrases to assert against.

Key points:

- The purpose is to validate file upload, ingestion, and chat-based retrieval.
- Components include: uploader, document indexer, retriever, and chat interface.
- The document addresses the problem of verifying end-to-end behavior of a RAG pipeline.
- Quote/Definition: "Retrieval-Augmented Generation (RAG) combines information retrieval with text generation to ground responses."
